### General Description

The HT10XX series is a set of three-terminal low power voltage regulators implemented in CMOS technology. They are available with several fixed output voltages ranging from 1.5V~7.0V. The advantage of CMOS technology is low voltage dropout and low quiescent current.

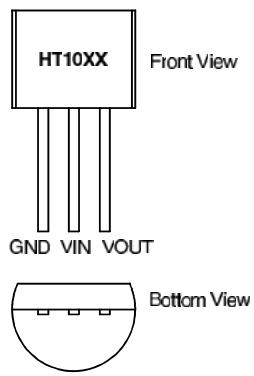

Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain variable voltages and currents.

## Application Circuit

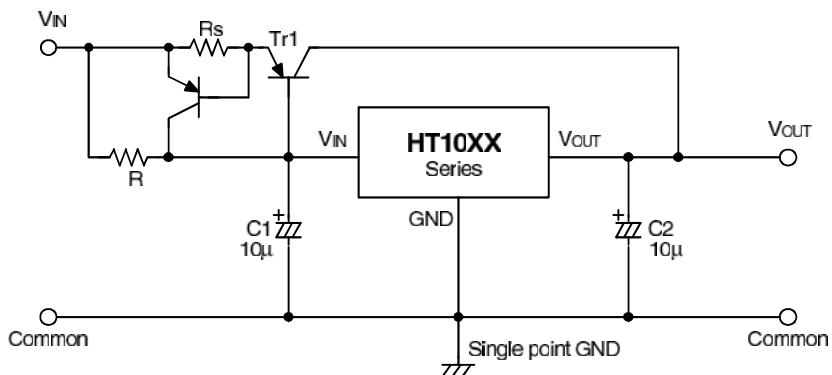

The basic circuits using the HT10XX series

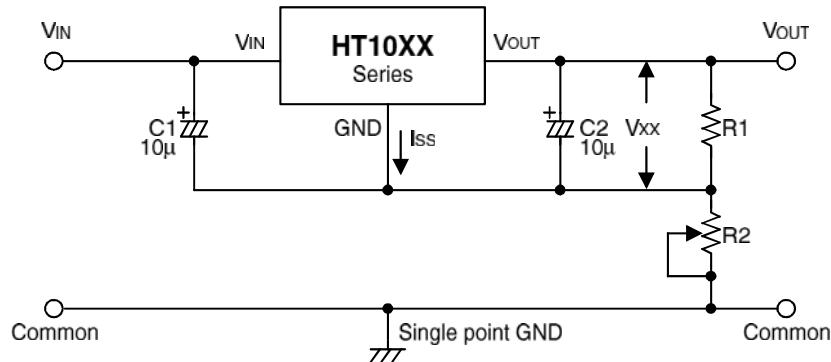

### High output current positive voltage regulator

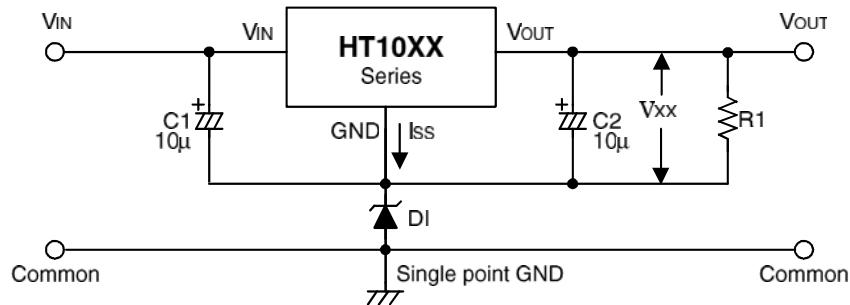

### Short-Circuit protection for Tr1

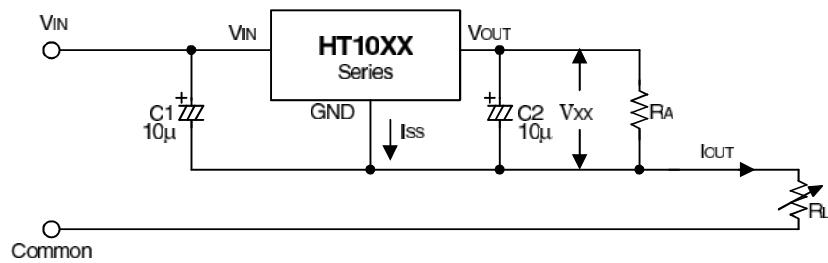

**Circuit for increasing output voltage**

$$V_{OUT} = V_{XX} \left( 1 + \frac{R_2}{R_1} \right) + I_{SS} R_2$$

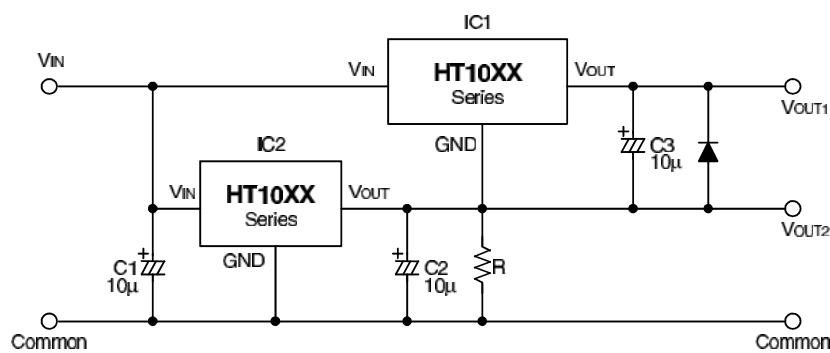

$$\approx V_{XX} \left( 1 + \frac{R_2}{R_1} \right)$$

**Circuit for increasing output voltage**

$$V_{OUT} = V_{XX} + V_{DI}$$

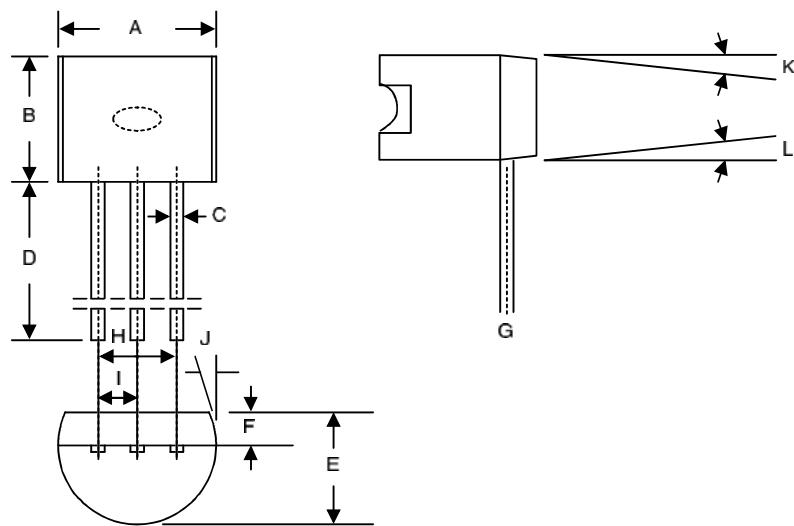

**Constant current regulator**

$$I_{OUT} = \frac{V_{xx}}{R_A} + I_{SS}$$

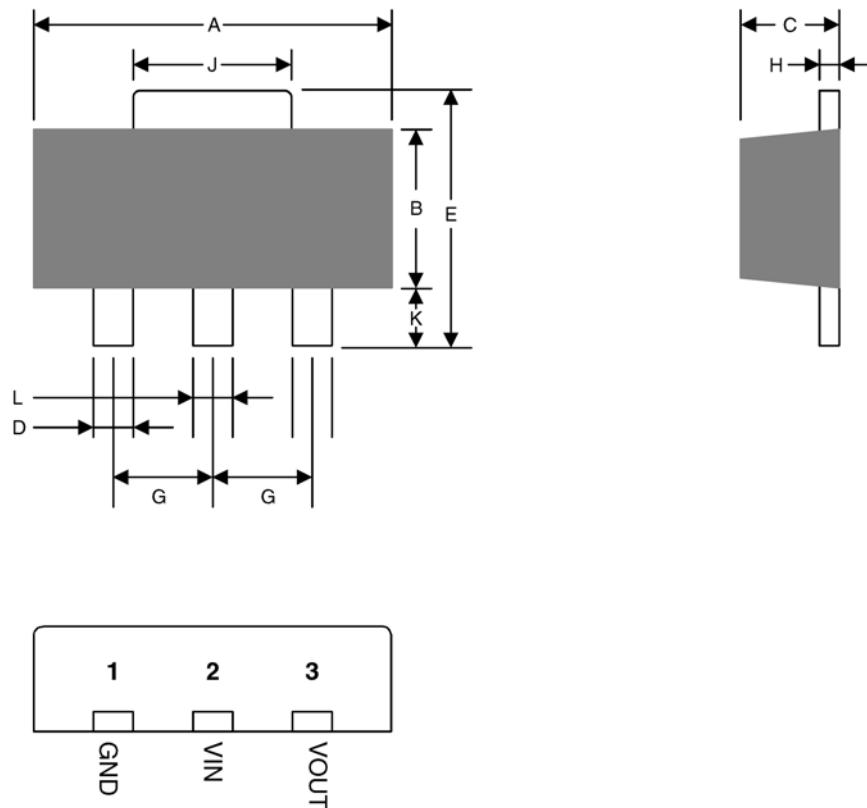

**Dual supply**
